Group 13 Peer Testing Instructions

1) Team Information

Group Name: Flashcard Roguelike

Team Members: Lawrence Emmer, Ademar Gamero, Logan Watson, Alexander Tong, Mohsin Shah, Nick Tassone

Preferred Communication: Email (CC all)

- ltemmer@uwm.edu
- lawatson@uwm.edu
- aegamero@uwm.edu
- ntassone@uwm.edu
- artong@uwm.edu
- mohsin@uwm.edu

2) System Overview

Flashcard Roguelike is a 3D roguelike game that heavily integrates flashcards into gameplay. It is meant for anyone who wants an alternate method to study their flashcards. Players have the option to import their own flashcard CSV sets or create a set via the in-game set creator; these sets will be used for gameplay. Players must explore the floors of the dungeon, fighting enemies, and gathering loot along the way. Each floor ends with a boss fight, where victory or defeat is decided. Winning fights and advancing further increases the difficulty; conversely running will decrease the difficulty. Players can delve deeper into the dungeon, or quit and view statistics of their gameplay during that session. Through use of the game, players will become more familiar with their study material in an engaging and fun way.

3) Access Instructions

Github Repository: https://github.com/LTEmmer/Group13Capstone.git

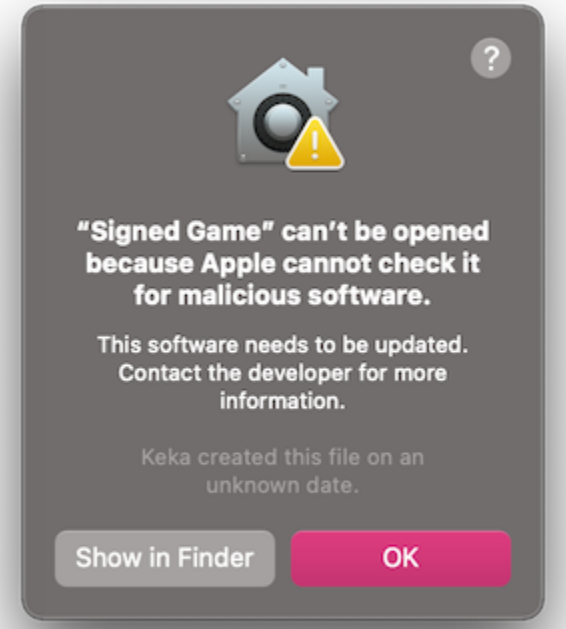
Link to exe (download the most recent version):
https://github.com/LTEmmer/Group13Capstone/releases

Windows Instructions

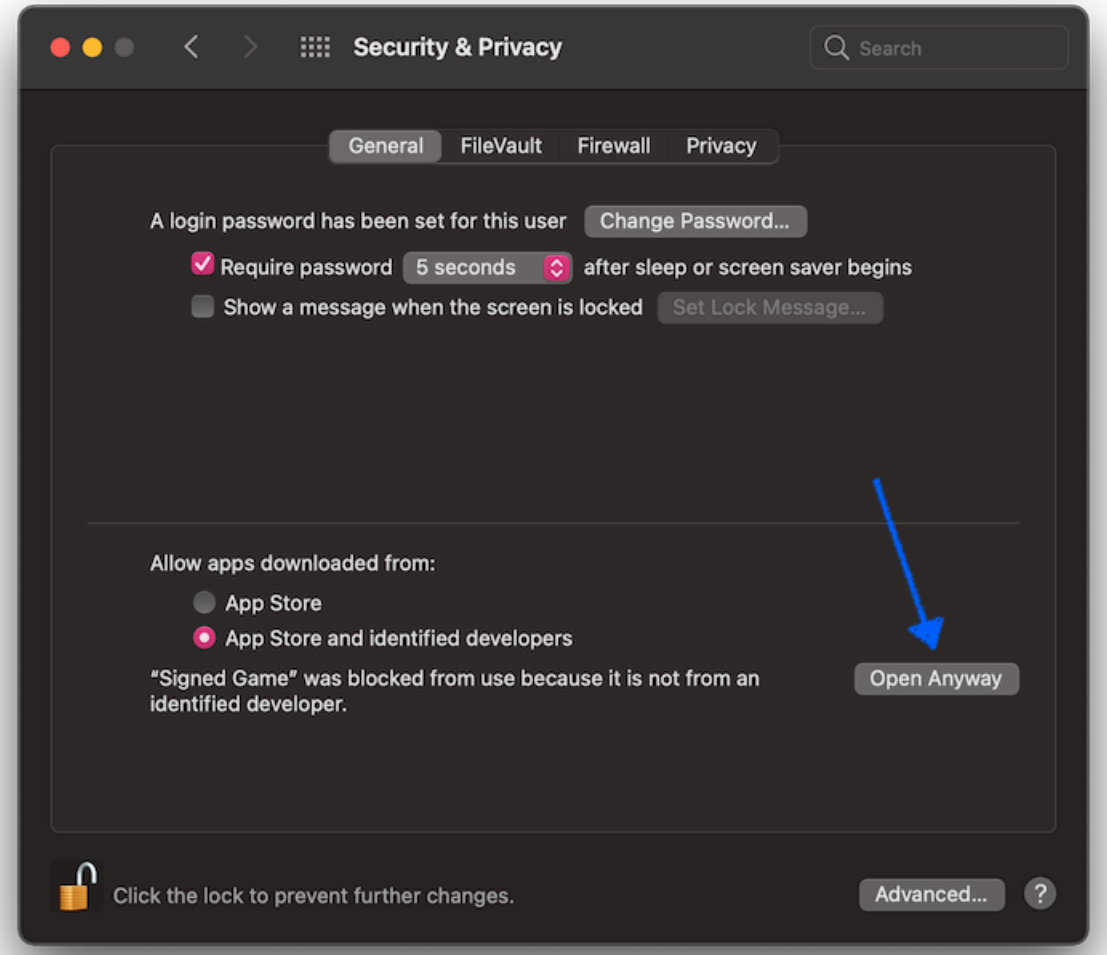
1. Download the zip for the exe from the link above.
2. Extract zip for exe.
2. Run the exe file.

MacOs Instructions

1. Extract the zip file
2. When you try to run the app for the first time this dialog will appear



3. Our app is signed but not notarized since we are not formal app developers
   a. So additional steps are required to bypass GateKeeper MacOs version of Windows Defender
4. Open System Preferences
5. Click Security and Privacy
6. Then click General
7. Select App Store and Identified Developers



8. Or you can right click the app icon in the finder window and select Open from the Menu
   a. 
9. Then Click Open in the confirmation dialog

   a.
10. Enter your password if prompted
11. If you're still having difficulty running the game and have access to a windows machine try running the windows version.
12. Feel free to reach out to Ademar (aegamero@uwm.edu) if your still having issues

Godot Engine / Editor Instructions (If exe isn't working):

1. Go to the official Godot website at https://godotengine.org/download/
2. Download the most recent version of the .NET version of Godot and dependencies if needed.
3. Extract the downloaded Godot zip file to a location of your choice.
4. Clone or download the project repository:
   a. Go to the GitHub link above, click the green Code button, and select Download ZIP, then extract it.
   b. Alternatively, open a terminal or Git Bash and run: git clone https://github.com/LTEmmer/Group13Capstone.git

5. Launch the Godot executable you extracted in step 3.
6. In the Project Manager window that appears, click Import.
7. Navigate to the folder where you cloned or extracted the repository.
8. Select the project.godot file inside the project folder and double click it.
9. Click Import & make sure the Edit Now box is checked to open the project in the Godot editor.
10. If asked to open even though the engine version changed click “Open Anyway”.
11. Once the editor finishes loading and importing assets (this may take a moment on first launch), press F5 or click the Play button in the top-right corner of the editor to run the game.
12. If prompted to select a main scene, select Project at the top, then Project Settings, then go to Application-Run, then in the Main Scene field, use the path for the main_menu.tscn.

Note: The exe is all that's really needed to test the project since the editor will run the project in mostly the same way. However, the editor does allow you to view the scene structures, files, settings, etc.

No login credentials needed.

4) Required Test Scenarios

Required Test Scenario 1: Import the Provided CSV as a Flashcard Set

Goal: Verify that the CSV import flow works end-to-end.
Steps:

1. From the main menu, click "View Imported Flashcards".
2. Click the "Upload" button.
3. Click "Browse" to open a file dialog.
4. Navigate to the provided CSV file that came with the exe.
5. Click "Import".
6. Verify the new set appears in the flashcard list with a checkbox.
7. Check the checkbox to mark it active, then click "Back" to return to the main menu.
8. Quit and reopen the game. Check if the newly imported set persists in the "View Imported Flashcards" menu.

Expected Result: The set is imported, named after the file, is available for use in gameplay, and persists.

Required Test Scenario 2: Create a Flashcard Set Using "Create New Set"

Goal: Verify that a user can manually author a flashcard set in-game.
Steps:

1. From the main menu, click "View Imported Flashcards".
2. Click "Create New Set".

3. Enter a name in the "Set Name" field (e.g., My Test Set).
4. Fill in a question and answer for the first card row.
5. Click "Add Card" to add cards and repeat step 4 for each added card until done (you can add as many cards as you want).
6. Click "Save".
7. Verify the new set appears in the flashcard list.
8. Check the checkbox to mark it active, then click "Back".
9. Quit and reopen the game. Check if the newly imported set persists in the "View Imported Flashcards" menu.

Expected Result: The set is saved, is listed alongside any imported sets, and persists.

Note: If it is hard to tell if the new sets are active in gameplay, disable some other sets to increase the likelihood of these new cards appearing.

Required Test Scenario 3: Explore the Dungeon Floor and Reach the Boss / Exit Room

Goal: Verify that the player can navigate through the dungeon and reach the final room on the main path.
Prerequisites: At least one flashcard set must be active (from Scenario 1 or 2).
Steps:

1. From the main menu, click "Start Game".
2. The player spawns in the entrance room.
3. Read the signs and learn how to play.
4. Interact with the connection at the end to move to the next room.
5. In combat rooms, engage and defeat all enemies (connections remain locked until the room is cleared).
    - When getting close to an enemy, combat begins. Answer correctly to attack.
6. Continue following connections through the dungeon. The player can check their progress via the minimap in the top left corner by holding the left tab key.
7. Reach the exit / boss room (the final room on the main path).

Expected Result: Player successfully navigates from the entrance room to the boss / exit room without getting stuck, and combat rooms properly unlock exits after all enemies are defeated.

5) Optional Test Scenarios

Optional Scenario 1: Beat the Boss

Goal: Verify the boss encounter and floor completion flow work correctly.
Steps:

1. Complete Required Test Scenario 3 to reach the exit room.

2. Engage the boss enemy to start the flashcard battle.
3. Answer flashcard questions correctly to deal damage. **Note:** The boss requires a streak of consecutive correct answers before damage registers. Damage cannot be fully blocked in boss combat.
4. Defeat the boss.
5. Observe the stats menu then the victory menu.
6. Click "Next Floor" to continue, or "Exit to Menu" to return.

Expected Result: The boss is defeatable, the victory menu appears, and the player can proceed to a new floor with increased difficulty.

Scenario 2: Try to Fill All Equipment Slots

Goal: Verify that the equipment and inventory systems work correctly across all slot types.

Steps:

1. Play through the dungeon and collect items from treasure and event rooms (found at the ends of branches or on the main path).
2. Open the inventory UI (hotkey shown on-screen) and navigate to the “Tool” tab.
3. Select a tool item and equip it to its designated slot.
4. Attempt to fill as many of the 8 equipment slots as possible:
    - Head, torso, legs (1 slot each)
    - Left hand, right hand (weapons/tools)
    - Accessories 1–4 (passive buff slots)
5. Verify that equipped items apply their passive effects.

Expected Result: Items equip to the correct slots, effects apply, and no slot accepts an incompatible item type.

Scenario 3: Fully Explore a Branch

Goal: Verify that optional branch paths generate correctly and reward the player.

Steps:

1. While navigating the dungeon, look for connections with a green label, these mark optional branch paths (vs. white labels for the main path).
2. Interact with the green-labeled connection to enter the branch.
3. If the branch has a combat room, defeat all enemies to unlock the next connection.
4. Continue to the treasure room at the end of the branch.
5. Collect all items in the treasure room.
6. Return through the entrance door back to the main path.

Expected Result: The branch generates with a treasure room at its end, items are collectible, and the player can return to the main path without issue.

Scenario 4: Try to Find a Game-Breaking Bug

Goal: Stress-test the game by attempting unusual or unintended interactions.

Suggestions:

- Answer flashcard questions extremely fast or slowly.
- Try to enter an invisible door.
- Import a malformed or edge-case CSV (e.g., a file with only one column, blank rows, or a very large number of cards).
- Use items rapidly during battle.
- Die intentionally and verify the game over screen behaves correctly.
- Return to the main menu mid-dungeon and re-enter the game.
- Etc.

Expected Result: The game ideally handles all inputs gracefully without crashes, softlocks, or corrupted state.
